

JYFL monochromator: collaboration

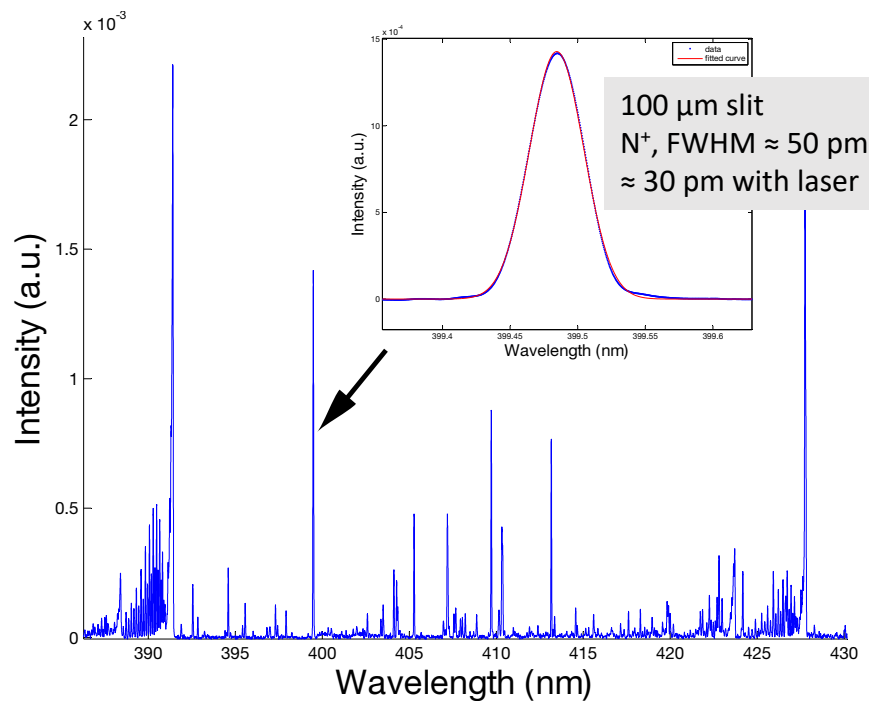

Developed diagnostic is very powerful setup to study visible-light emission of highly-charged plasma.

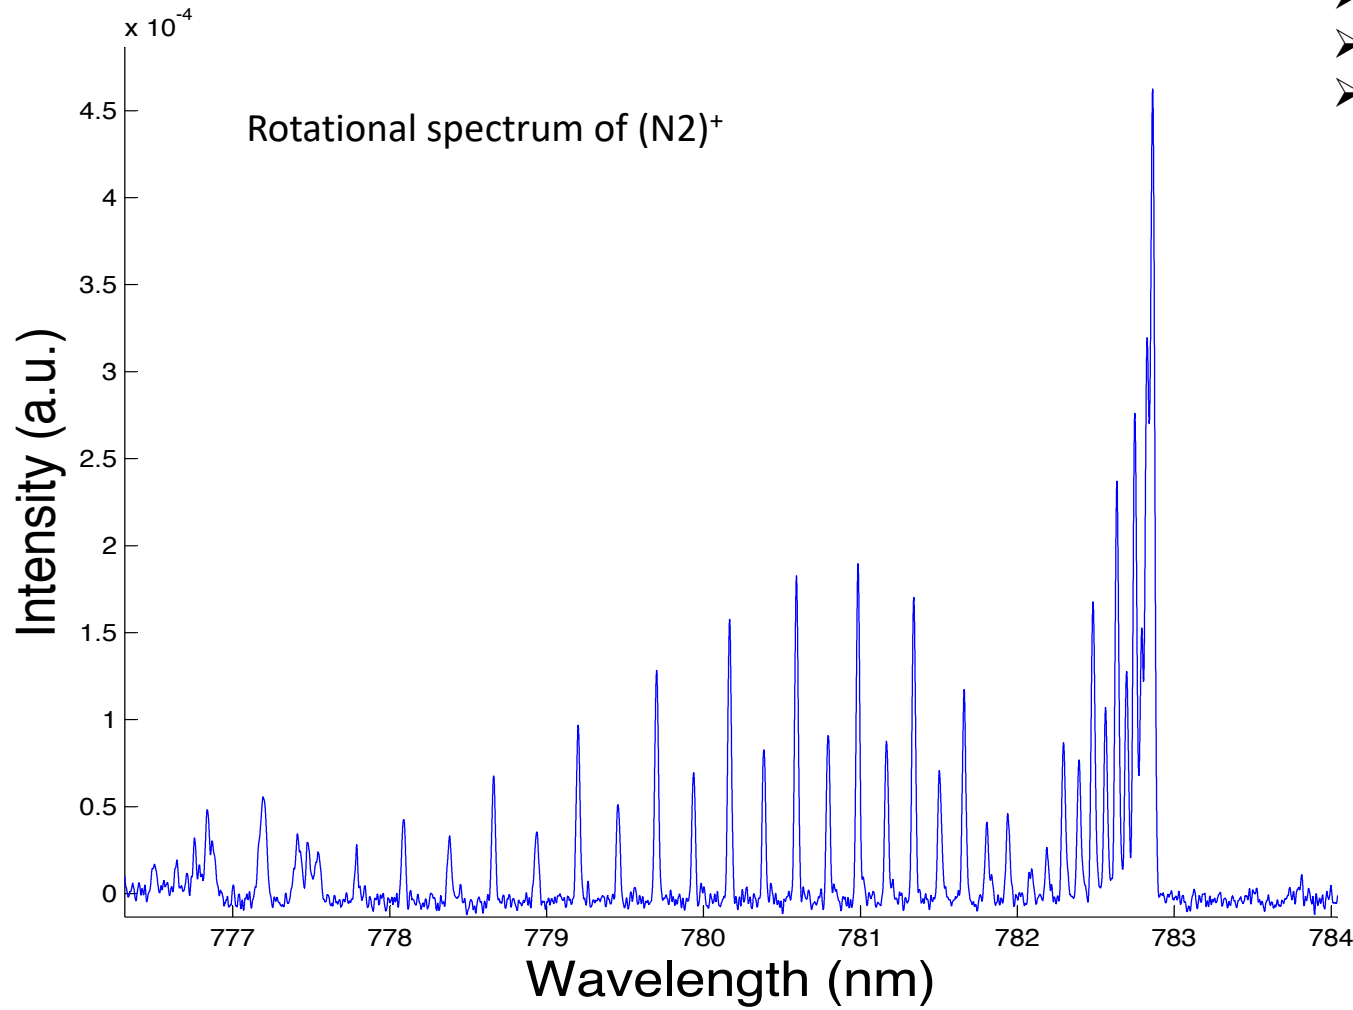

Groups/experts interested in using the combination of ECRIS plasma and high resolution spectrometer (OES) are warmly welcome to present proposals and to perform R&D with us!

10 μm slit, HeNe-laser (2 pm broadening) \rightarrow FWHM < 10 pm

Nitrogen plasma, JYFL 14 GHz ECRIS

- Anyone interested in?
- Ideas or suggestions?
- Knowing any experts/research groups who potentially are interested in this kind of possibility?
